ANTI FOAM

DESCRIPTION

Anti foam to be added to the fountain solution.

MAIN FEATURES

Anti Foam is a solution based on substances active in the reduction and elimination of the foam from the dampening solution.

Anti Foam does not change the pH and the conductivity parameters of the dampening solution

ADVANTAGES BENEFITS

1. The perfect control of the foam allows the continuity in the printing cycle
2. Since it does not change the pH and conductivity values, it avoids the necessity for a constant and regular control of the same
3. Ensures a homogeneous distribution of fountain solution on the dampening rollers
4. Reduces operating and machine maintenance costs
5. It is stable for a long time

INSTRUCTION FOR USE

Add **Anti Foam** directly in the refrigerating tank with a maximum percentage of 5%.

Should the foam persist, contact Green Solutions' Technical Department
