

## DESCRIPTION

Damping additive for HEAT-SET presses, for IPA free printing.

**HMR 29** is a new generation additive for medium and big size presses.

Thanks to the combination of the dynamic surfactants, the performances obtained on the prints are excellent and the cleaning of water dosing rollers is optimal without ink build-ups.

## MAIN FEATURES

**HMR 29** gives to the damping solution high stability of pH and conductivity values, maintaining it clean and consequently prolonging its regeneration time. **HMR 29** contains specific components that avoid the oxide deposit on the rollers, considerably improving the water / ink balance. **HMR 29** has a high speed of water/ink balance.

## ADVANTAGES BENEFITS

1. Damping solution efficient and stable in time, with consequent reduction of operating costs.
2. Drastic reduction of start-up times
3. Total elimination of oxide from rollers and blankets
4. Strong reduction of waste copies and of relative operative costs
5. Sharper and more brilliant printing
6. **Lower environmental impact**

## INSTRUCTIONS FOR USE

Dilute **HMR 29** in proportion of 2-4% depending on original water hardness.

**HMR 29** is recommended for medium-hard waters.
